Abstract (en)  
[origin: WO9909967A2] Methods are described for preventing or reducing the risk of a first occurrence of a cardiovascular event using an HMG-CoA reductase inhibitor alone or in combination with another lipid altering agent. Subjects to be treated are those having an average serum total cholesterol level, an average to mildly elevated serum low-density lipoprotein cholesterol level, and a below average serum high-density lipoprotein cholesterol level, with no history of clinically evident coronary disease.
