Abstract (en)  
[origin: DE19736999A1] The invention relates to a device for discharging media with at least one discharging outlet for the media. Said device contains at least one plastic component (24) which is irradiated, whereby beta and/or gamma irradiation can be used. The plastic component functions primarily as a seal or valve which is pre-stressed when mounted. The invention is particularly suitable for use in discharging devices which are provided with corresponding irradiated seals or sealing sleeves of pumps, or thrust piston pumps. Thermo-plastic material, mainly medium or low density polyethylene, is used.
