Abstract (en)

[origin: WO9840175A1] The invention refers to a device and a method for the treatment of the inner surface of a container (2) having an opening. The device comprises a treatment member which is mountable in such a position that it extends into the container (2) through said opening and which is arranged to enable said treatment by the supply of a fluid. Furthermore, the device comprises a cover (1) arranged to close said opening and support the treatment member in said position and having a sealing surface abutting a sealing surface of the container. The cover (1) comprises a drainage passage for fluid consumed.
