Abstract (en)

[origin: WO9729917A1] The present invention provides an element (1) for mutually binding two or more sheets of paper provided with perforator holes, comprising: a substantially flat and elongate body portion with a length roughly equal to a distance defined by two perforator holes and a width smaller than or equal to the diameter of the perforator holes; an insertion end portion (3) in the line of the body portion of a width such that it can be placed through the perforator holes; and a second end portion (4) which can be provided with a decorative part (5) which is wider than the insertion end portion (3) and which extends relative to the insertion end portion (3) in opposing direction from the body portion (2).
