Abstract (en)  
[origin: WO9828221A1] The invention relates to a device (1) for a yoke (2) which may be tipped and which is provided with a load function and which may be detachable connected to the forks (3) of a lift truck (4) or another vehicle which is provided with forks. The yoke (2) is provided with a driving motor (5) and generators (6, 7) of lifting force which are separate from said vehicle (4), and that the yoke (2) has such a centre of gravity that it stays within the ordinary lift forks (3) of the vehicle both in empty as well as in filled condition. The yoke (2) is designed so it may be used by all trucks and vehicles with lift forks for Europe type pallets or corresponding. The fork lift vehicle does not need to be adapted and with the yoke as an aid, it is possible to lift, handle and empty containers for secondary material, waste or corresponding.
