Abstract (en)

[origin: WO9855575A1] The invention relates to moulded bodies having a detergent and cleaning action, especially tablets such as those consisting of detergent, dishwashing product, stain remover or water-softener. Thanks to the use of the additive granules provided for by the invention, the disintegration rate of said tablets conforms to the requirements for use in domestic washing machines. Said additive granules contain 10 to 95 weight percent cellulose having a particle size of less than 100 µm as well as 5 to 90 weight percent microcrystalline cellulose and/or one or several ingredients of detergents and cleaning agents. They are superior to known cellulose-based disintegrating additives in terms of their physical and washing properties.
