Abstract (en)

[origin: FR2762034A1] The invention concerns a machine (1) comprising: at least a brake coil (14), containing the wire (2) to be strung; at least a roller (13) for receiving, coiled about it, the wire (2) unwound by the coil (14) and for appropriately directing said wire (2) for stringing; and means (35) for displacing said roller (13) between a retracted position, wherein said roller (13) is located on the near side the plane defined by two consecutive supports (3), and a projecting position, wherein said roller is located beyond said plane.
