Abstract (en)
[origin: WO9914506A1] Device (1) in connection with a rotation actuator for limiting a rotational movement of the actuator shaft (10) and including at least one rotation stop element (3, 3') which is adjustable and fixable in the rotational direction and which is contained inside a rotation stop housing (2, 2'). The invention is distinguished by the rotation stop housing comprising a first portion (2'), which is adjustable in the rotational direction and fixable with respect to the rotational actuator housing, the rotation stop element (3', 4') being rigidly connected to said adjustable portion (2') of the rotation stop housing, and the first portion (2') being adjustable with respect to a fastening portion (17) which may be a part which is connectable to the rotational actuator housing or an integral part of the rotational actuator housing.
