Abstract (en)

[origin: EP1008685A1] The washing procedure consists of placing the washing (24a, 24b) in two compartments (14a, 14b) of a drum which rotates about a horizontal axis and is divided by a radial partition (16). The drum is rotated at an angular velocity which subjects the washing to a more or less constant radial acceleration. The drum is rotated by a motor operating at a more or less constant speed. The drum is rotated at an angular velocity which subjects the washing to a more or less constant radial acceleration with a mean value of about 0.70 - 0.95g, where g is the acceleration due to gravity.
