Abstract (en)

Internal combustion engines known as common rail share an integrated very high pressure fuel supply and protection from leaks may be provided by a monitoring unit which compares measured pressure with a threshold and signals leaks or potential leaks to applications programs and a fault memory. Under leak conditions the driver is warned, then the engine power is diminished for a period before being stopped altogether

Abstract (fr)

Procédé de contrôle d'un moteur à combustion interne d'un véhicule, dans lequel la détection d'un risque de fuite provoque le déclenchement d'un moyen d'alerte du conducteur, une limitation des performances du moteur, et un arrêt différé du moteur.
