Abstract (en)  
[origin: EP1008748A2] The axial reciprocating motor has a control disk (19) at the cylinder drum which is moved to swing on a lateral plane (E), with a curved surface. At least one holder section (32) is at the mounting wall (22) with a shoulder surface (33) in a curvature parallel to the mounting sliding surface (21). It extends into the angular range which includes the center axis (7a) of the control disk (19) in the outwards and inwards swung positions.
