Abstract (en)

[origin: EP1008963A1] A method and a system for the registration by means of a data logger of working times of ambulant nursing staff in the home care sector. With the data logger, which is provided with a date and time clock, a contactless radio-frequent identification label is read at the home of the attended person to record the times of coming and going, to transmit them at a later time by telephone via a modem to an information processing system. If this transmission has proceeded well, the stored information can be removed from the data logger, so that it can be used again.
