Abstract (en)
A hand held input device, for example for a motor controller, is disclosed which includes an illuminated display panel (1) having a panel portion (3) adapted to be viewed by a user, a liquid crystal display (LCD) panel (5) which is viewable through an opening in the panel portion (3) and a window (7) of transparent material adapted to cover the LCD panel (5) and opening. A number of light emitting diodes (6) are located behind the window which incorporates at least one lens (8) which directs light from the light emitting diode through the window (7) so as to be viewed by the user.
