Abstract (en)

[origin: EP1009060A2] The contact device has a box fixed to the window, with electrical connections on the exterior of box. The box contains electrical elements such as an amplifier, with an input connection between the entry to the box and the electrical element, fixed on the window. There is also an output connection. Contact regions on the element are arranged to face corresponding connection areas of the box. These are stuck in position, and make contact via cut-out regions in the contact areas. Contact entry may be via connecting wires.
