Abstract (en)
[origin: WO9823188A1] A restraining device includes an article of dress (3) or a harness, which is put on or fastened around at least one part of the body. Two parts (4, 5) of a strap of about the same length extend from the backside of the article of dress (3) or the harness and outwards to the two sides (9) of the bed. In order to prevent a person being in bed from turning his body in one of the other directions from a position lying on the stomach to a position lying on the back, said strap parts (4, 5) are attached along the entire backside of the article of dress (3) or harness or are attached to the sides (6) of the article of dress (3) or harness. The free ends (7, 8) of the strap parts (4, 5) are extended from the sides of the article of dress/harness to the closest side (9) of the bed (1) and are attachable to this side (9), whereat the length of the two strap parts (4, 5) can be adjusted by means of a buckle (11) or the like so that the strap parts (4, 5) are completely straightened when the person has turned his body not more than about 90 DEG .
