Abstract (en)
[origin: WO9911166A1] The invention concerns a head (2) mounted free at the fork handle (1) end about an axis of rotation (XR) to enable the handle to rotate relatively to said head (2). Said fork is used for twining spaghetti by fixing the head in the palm of one hand (5) and turning the handle between the fingers of this hand. The mobile head is freely mounted by click-stop fixing means (1B) with screws (23, 53) or by insertion. The handle has several flat side surfaces, in particular a pentagonal profile.
