Abstract (en)
[origin: WO9832409A1] Disclosed is a highly efficient and multifunctional massage apparatus, having an active contact surface for the tissues to be treated as well as a device to drive said active surface into an oscillatory movement around an axle. Seen in cross-section, the active surface presents, perpendicular to the axle, in various directions, rays of different lengths and is designed so as to rotate parallelly to the axle in such a way that various areas of the active surface are in contact with said tissues.
