Abstract (en)  
[origin: WO9820462A1] A device (1) for sorting documents comprising a frame (2) in which are arranged a number of vertical and substantially parallel compartments (4) in which documents are placed standing up. Said compartments (4) are delimited by means of partitions (3) which at their inner vertical sides and/or at an inner portion of their upper sides are fixedly or removably connected to elements (5) forming part of the frame (2) or arranged therein. The sorting device is characterised in that the compartments (4) have a bottom (6) in which the sorted documents rest, said bottom (6) and partitions being displaceable in relation to one another in a direction which, when seen in a horizontal plane, at least in the final stage of the movement, deviates from the general direction in which the partitions (3) extend.
