Abstract (en)

[origin: WO9855312A1] The invention relates to a method and device for driving a printing press with at least one integrated imaging device. The aim of the invention is to provide a method and a device enabling higher imaging speed and therefore minimizing the time required for image formation. According to the invention, this is achieved by detaching the drive mechanism of the printing form cylinder (10) from the drive wheel train, by driving the printing form cylinder (10) with a drive mechanism of its own during imaging at imaging speed and by integrating the drive mechanism of the printing form cylinder (10) in the drive wheel train in an operating phase position.
