Abstract (en)

[origin: FR2759710A1] The production of a yarn sheet (4) comprises laying in succession the sections (2a, 2b,...) of the material across a take-off conveyor, in alternating directions. The conveyor is positioned and shifted at least to match successive folds in the same direction (2ab, 2cd,...; 2bc, 2da,...). Also claimed is a cross layer assembly with a system (29) to give the required profiling by the shifting movements of the conveyor at least inverse to the successive moves of the slide (21) after movement in the same direction as the slide (21).
