Abstract (en)
[origin: WO9912145A1] The present invention relates to a screwing tool made of hardened steel such as a screw-driver insert. This tool comprises a screwing head (4) followed by a neck (6) bearing an identification mark, as well as a torque transmission section (2) extending on the other side of said neck. According to this invention and in order to provide an optimal shape for use, the identification mark comprises symbols (18) which can be distinguished from each other by an angular offset movement in the circumferential direction, or which are arranged so as to be distinguished from each other.
