Abstract (en)

[origin: EP1010598A1] The mobile vehicle sill consists of a base (23), designed to be fixed to the floor of the vehicle, and carrying a longitudinal mobile sill (22). The means for the displacement of the sill are also fitted to the base and consist of an adjustable length jack (56), which extends longitudinally, roughly parallel to the sill, and which is connected to the base and the sill by hinge assemblies (28A, 28B), which transform the movement of the jack into movement and displacement of the sill.
