Abstract (en)

[origin: EP1010614A1] The present invention concerns a propulsion and steering module for naval craft that has the distinctive characteristic of including an innovative cooling system in which the cooling liquid circulates in the inner casing of the motor (11) without being in contact with the moving or live parts of the motor itself. The liquid is cooled using at least one heat exchanger (21) mounted in at least one end of the module.
