Abstract (en)

[origin: EP1010638A1] The strip-shaped zone (5) of the bag edge material (2) extends beyond the sealing zone (4) and serves for opening the bag (1). In the opening process it is peeled back from the joint zone. For resealing purposes the edge material has several cutouts (9, 10), while the top carrier strip (18) is provided with a permanently adhesive layer (19) at least in the region of these cutouts.
