Abstract (en)

[origin: EP1010829A2] A bushing (9) has a blind hole (11) for taking the head (5a) of a screw (5). The base (9a) of the bushing has a hole into which fits the threaded shank (5b) of the screw. The bushing has a collar-edge (13) supported directly or indirectly by means of a spacer piece (10) on the cover or holder strip. After the screw has been tightened in the blind hole, a body is inserted to close the outer opening, with a slightly oversized cylindrical bolt (12).
