Abstract (en)  
[origin: EP1010857A1] A standard blading the same for all steam turbines is used as the first blading (16). In addition the matching of the individual steam turbine (10) to the thermodynamic parameters of the respective application is carried out by a corresp. construction or variation of the regulating step (13). The steam turbine (10) respectively additionally has a medium and low pressure part (12 or 22) with a second (17) and a third blading. Also a standard blading is used, the same for all steam turbines (10) is used.
