Abstract (en)
[origin: WO9911226A1] Disclosed are hair conditioning compositions comprising by weight: (a) from about 0.6 % to about 9.0 % of an amidoamine; (b) from about 0.1 % to about 10.0 % of an acid selected from the group consisting of acetic acid, tartaric acid, fumaric acid, lactic acid, malic acid, succinic acid, and mixtures thereof; (c) from about 1 % to about 15 % of a high melting point compound having a melting point of at least about 25 DEG C selected from the group consisting of fatty alcohols, fatty acids, fatty alcohol derivatives, fatty acid derivatives, hydrocarbons, steroids, and mixtures thereof; and (d) water; wherein the pH of the hair conditioning composition is between from about 2.5 to about 4.5, and wherein the composition is substantially free of quaternary ammonium compounds. Further disclosed are suitable methods of making the conditioning compositions.
