Abstract (en)

[origin: DE19654746A1] A new Ca- and Mg-free dialysis solution contains citrate as anticoagulant and has a sodium hydrogen carbonate content which does not exceed 32 mmoles/l. During dialysis, part of the dialysis solution is added to the blood before it enters the dialysis cell. A device in which the tube coming from the patient and the tube for supplying dialysis solution to the dialysis cell are united enables implementing the process.
