Abstract (en)
[origin: WO9847659A1] A grinding unit is serving for grinding for example stone floors (2). The grinding unit comprises a guidable control grinding machine (1) with a grinding disc bearing on the floor with the grinding bodies of the machine during operation, a motor (12) for rotating the grinding disc, and a cover plate mounted above the grinding disc, the cover plate is firmly connected to partly the motor and partly a manually operated handle (4) for controlling the grinding machine. The grinding unit furthermore comprises a number of handleless attached grinding machines (26) mainly constructed in the same way as the control grinding machine and directly or indirectly coupled to this. Thereby a much higher productive capacity is obtained than known per se.
