Abstract (en)

[origin: DE19739801A1] Disclosed is a printing or copying machine comprising a device for automatic document assembly by means of bolts (17). For that purpose, the thickness of the loose sheet (11) work is determined, on the basis of which bolts are cut to length in a reserve of tubular material (16). A positioning device positions the bolts (17) into the perforations of the work. Said bolts are then compressed by means of stamps (18), resulting in the formation of non removable closing tips.
