Abstract (en)  
[origin: EP0903274A1] The coupling is fastened to the vehicle via an impact energy absorption element. This consists of two or more part elements, which are in friction connection with each other. The elements are displaced relative to each other after overcoming the friction connection, to absorb energy in the longitudinal coupling axis. The part elements are connected via a screw connection. One part element is a tube anchored in the vehicle floor.
