Abstract (en)
[origin: DE19642118A1] The invention concerns a device for conveying and distributing folded signature (24, 26), wherein the signatures removed from the bucket wheel (2) of a folding apparatus by means of a gripper chain (6) are distributed to preselectable distribution points (A, B, C, D, E). The signatures are each transferred by means of a controllable switching unit, for example in the form of a motorized cam plate (33 to 37) which can be controlled or regulated. To that end, the switching cams are disposed in a switching or in a non-switching position on the cam plate.
