Abstract (en)  
[origin: WO9913064A2] The invention relates to an in vitro method for infecting one or more cells with a viral vector capable of transporting exogenous or recombinant nucleic acid into the cells to be infected, comprising the steps of: a) collecting the cells to be infected; b) treating the collected cells with at least one cytokine; and c) infecting the collected cells with a viral vector such as adenovirus. A method of infecting rheumatoid synovial cells and other cells comprising high levels of cell surface integrins is also disclosed.
