Abstract (en)
[origin: WO9913145A1] The invention relates to a thread controlling assembly containing an oscillating operable lifting device (154) with at least one carrier (142, 144) for a thread (4) and a control element (140) which can be actuated by means of an actuator (160, 178, 202) in order to selectively bring the thread in contact with the carrier. According to the invention, the thread controlling assembly is improved in that the control element (140) is independently arranged from the lifting device (154). Additionally, the control element can be simply moved around the gear size for the operation of the thread in the carrier.
