Abstract (en)
[origin: FR2781062A1] The invention concerns a glazing incorporating at least an electrically controllable system with variable optical and/or energetic properties, in particular in the form of a system with reversible insertion material(s) of electrochrome type, in the form of an optical or viologen valve system, a system with crystal liquids or cholesteric gels. Said glazing comprises at least means for adjusting the optical appearance provided by said system to said glazing, means including at least a coating with anti-reflection properties in the visible.
