Abstract (en)
[origin: WO9965238A1] A Remote Video Assist Recorder Box (10) is suitable for remote use in "on location" production environment. Multiple takes on a single channel may be digitally recorded concurrently with camera filming. Recording is automatically triggered upon the "rolling" of the camera (45) and stops when the camera stops filming. Recorded clips may be marked as "good" takes. Fast playback of recorded clips may be provided through either one-button (115) or automatic queuing to the beginning of a just recorded clip. Clips may be played back individually, or all or only marked clips may be played back sequentially. Clips may also be selectively deleted either individually, or in a group (all marked clips or all clips). Selective control of compression ratios, frames-per-second emulation of recorded clips, nominal video standards, nominal speed, and slow motion standards are also included. The Remote Video Assist Recorder Box (10) may be operated as a "standalone" system in a production environment, or may be integrated into a larger, full-feature video assist system; alternatively, recorded clips may be exported from the system to other systems or devices.
