Abstract (en)

[origin: EP1013539A2] The device for fitting of the bearing neck(15) of the cab and the housing for the spring damper(17) are formed in one piece with the trailing arm(11) as forged part. The transverse stabilizer bar(12) has two symmetrically disposed angled arms, and is fastened by them to the trailing arm by screwed metal clamps(16). The trailing arms each have two members(18) for guiding of the transverse stabilizer bar. The stabilizer bar is made of steel tube, and the housing for the spring damper is formed as a bearing lug.
