Abstract (en)  
[origin: EP1013837A2] The valve cone in the closed position closes an inlet aperture of a valve body inserted in the housing. The valve cone (15) is connected with a threaded socket (25) provided with an inner thread, in which engages a drivable threaded spindle(29). The valve body is formed as a non-rotatable tube piece (17)in the housing (3). DETAIL DESCRIPTION - The tube piece has a central guide bush (24) connected to it by ribs (26). In the guide bush the threaded socket is non-rotatably fitted. The threaded socket is of one-piece construction with the valve cone. The threaded spindle can be fitted onto a vertical drive pin (30), formed as a multi-edge pin and which engages positively in a recess of the threaded spindle.
