Abstract (en)

[origin: EP1014178A1] An image-recording material which has at least on one surface side of a support a thermosensitive recording element containing a scaly organic acid silver salt, a reducing agent for a silver ion, and a binder, or a photosensitive recording element containing a scaly organic acid silver salt, a reducing agent for a silver ion, photosensitive silver halide, and a binder, wherein the NH_4^{+} content of all the layers on the surface side of the support which contains the thermosensitive recording element is from 0.06 to 3.4 mmol as the coating amount per m^2 of the support.
