Abstract (en)  
In color photographic material with a base, red-, green- and blue-sensitive silver halide emulsion layer(s) containing cyan, magenta and yellow coupler(s) respectively and a yellow filter layer over the green-sensitive emulsion layer, at least one layer between the base and the nearest light-sensitive emulsion contains a compound (I), with a methylene group between 2 electronegative groups. In color photographic material with a base, red-, green- and blue-sensitive silver halide emulsion layer(s) containing cyan, magenta and yellow coupler(s) respectively and a yellow filter layer over the green-sensitive emulsion layer, at least one layer between the base and the nearest light-sensitive emulsion contains a compound (I), with a methylene group between 2 electronegative groups, of the formula. X, Y = electronegative groups and together can form a group completing a 5- or 6-membered ring.

Abstract (de)  
Gegenstand der vorliegenden Erfindung ist ein farbfotografisches Aufzeichnungsmaterial, das in mindestens einer Schicht zwischen Unterlage und der zur Unterlage am nächsten befindlichen lichtempfindlichen Emulsionsschicht eine Verbindung der Formel (I) <IMAGE> in der X und Y: jeweils unabhängig von einander für eine elektronenziehende Gruppe stehen, und X und Y zusammen eine zur Vervollständigung eines 5- oder 6-Ringes notwendige Gruppe bilden können, enthält.
