Abstract (en)

[origin: EP1014232A1] The radio-telephone watch (1) is designed to be used on a mobile communication system. The watch (1) has a housing (2) and wrist strap (3) and includes: - a compartment (4) associated with a first end of the wrist strap (3) designed to accommodate a Subscription Identity Module (SIM) card (10) which allows access to the mobile communication system; - an electronic module (5) fitted inside the watch housing (2) which permits access to data stored on the SIM card (10), and; - electrical connections (6), between the SIM card (10) and the electronic module (5), integrated in the first end (31) of the watch strap (3).
