Abstract (en)

[origin: WO9858625A1] Disclosed are gel deodorant compositions comprising (a) from about 0.001 % to about 50 % by weight of a deodorant active, fragrance, or combination thereof; (b) from about 0.01 % to about 20 % by weight of a gellant; (c) from about 5 % to about 90 % by weight of a polymeric alcohol having at least one free hydroxyl group and also having from about 2 to about 80 alkoxylate radicals wherein in the alkoxylate radical contains from about 2 to about 6 carbon atoms; (d) from about 5 % to about 89 % by weight of a nonpolymeric alcohol having at least two free hydroxyl groups, and also having from about 4 to about 20 carbon atoms, wherein the weight ratio of the polymeric to nonpolymeric alcohol is from about 18:1 to about 1:5; (e) from zero percent to about 10 % by weight of glycerin; and (f) from about 0.01 % to about 89 % by weight of water. Also disclosed is a method of controlling malodor associated with perspiration by topical application of any deodorant composition containing a select combination of triclosan and triclocarban. All of these compositions remain clear or translucent over extended periods of time, and provide little or no skin irritation in addition to improved cosmetic benefits such as dry feel, ease of application, emolliency, fragrance longevity, and no powdery residue.
