Abstract (en)
[origin: WO9821792A2] A system to control distributed power in vehicles both on land and at sea is fully multiplexed, such that all components whether switch panels or power distribution centers are linked by a common bus and share all communications. An activated switch on one panel is enunciated on all other switch panels containing the same switch function. Power-output problems are indicated at all switch panel positions relating to that output. A switch on any panel can activate multiple outputs in multiple power distribution centers.
