Abstract (en)
[origin: WO9842590A1] The invention relates to a packaging comprising a container (1) with a bottom (4), and in connection with said bottom an annular side wall (5) defining at its upper edge (6) an aperture, and a strainer (2) for draining a product contained in said packaging; wherein the strainer (2) is provided with a holding device (14) that can be caused to interact with the container in order to hereby secure the strainer in a position which is vertically upwardly displaced relative to the usual storage position at the bottom of the container. Preferably the strainer is to be configured with an at least partially, preferably completely annular shoulder that can, upon positioning of the strainer (2) in a draining position in which the holding device (14) interacts with the container, be caused to abut on the container edge (6) at least in a section of said shoulder (13) and edge, respectively.
