Abstract (en)  
[origin: DE19740673A1] In one half of the casing (3,4) of each electrolytic cell (2), hydrophobic assemblies (12) are provided, confined by the partition (6). The hydrophobic assemblies are located where the primary bubbles form. They are sieve fabric, wire knit, nets or packings. The empty space is 60-98% of the cell volume. The open sieve area of the assemblies is 30-80%. Baffles are included.
