Abstract (en)

[origin: FR2780152A1] The heat exchanger comprises an array of parallel tubes (10) assembled at each end to a top or bottom manifold (12,14). Each manifold has a cover, or series of covers (24,26,28), of identical dimensions to direct flow through groups of the tubes. Additionally, intake and collector covers (16,20) direct flow into and out of the manifolds. The covers are normally made from pressed steel, located and brazed to lips (32,34) on the manifolds.
