Abstract (en)
[origin: WO9725704A1] A fuel discharge pump containing fuel discharge tube (11) with associated pistol (10). A combination of a tube bracing means (13) and an advertising holder (14) is arranged at a transition part (11a) between the flexible tube (11) and a rigid pistol (10). The tube bracing means (13) which is relatively bending rigid in all directions transverse to the tube longitudinal direction, comprises a part (14), which is expanded relative to the circumference of the tube. Said expanded part (14) is provided with an advertising field (15), which is delimited to at least one long main surface (29) at the expanded part (14) of the tube bracing means (13).
