Abstract (en)
[origin: WO9911046A1] A telephone apparatus, in particular a hand-held and/or mobile and/or digital telephone apparatus, comprises a database for holding a plurality of entries, each entry comprising a field for holding identifying information and a field for holding signalling information, selection means for selecting one of said entries of said database, and tone generating means (28) for generating signalling tones corresponding to said signalling information stored in the selected entry of said database. A dialling method employs such a telephone apparatus. The invention enables a user of a telephone to establish different types of connections in a convenient and error-free way.
