Abstract (en)

[origin: DE19741217A1] The method includes the steps of performing an identification of a subscriber at an access to the telecommunication network, addressing a personal database according to the identification, and transmitting one or several subscriber-specific features. The person is preferably identified by device of speech recognition or according to an input of a personal identification number. The selection and disposal of features may result according to the geographical location of the subscriber.
