Abstract (en)

[origin: EP1017185A1] The telecommunications network power control method has a receiver unit establishing the difference between the received power and the required transmitter power. The transmitter has a processing unit (12) which takes the difference signal received from the receiver (RC(n)) and a signal from the transmitter to produce the correct power output level PC(n), by delivering a signal command (T(n),t(n)) to the power command unit (11).
